

Managed Solutions

The first choice for the house building and construction industry

Reconomy – leading the waste management sector

Reconomy's services **extend** to all aspects of **waste management** – think of us as your **one-stop-shop**.

When we say 'leading the waste management sector,' we mean it. Our clients include some of the largest and most successful house building and construction companies in the world. And if we manage their waste, why not yours?

From individual projects to multi-site operations, Reconomy's waste management solutions are delivered on time and to budget. In fact, we proactively work with our clients to drive down the cost of waste.

As a full service provider, Reconomy's services extend to all aspects of waste management. Think of us as your one-stop-shop. From site segregation to land remediation, skip hire to the safe disposal of hazardous waste – we can manage all of your waste and recycling needs, simply and efficiently.

“ We **proactively** work with our **clients** to **drive down** the **cost of waste**. ”

Leading-edge reports

Designed to support the house building and construction sectors, Reconomy's range of reports gives you the management data you need.

- Unique online report builder
- Huge range of reports covering every aspect of waste management – from tonnage and volume to efficiency by construction unit
- Reports tailored to your organisation
- Reports that can integrate information from your own IT systems
- Comprehensive information and easy to understand
- Graphical and statistical reports displayed in a clear format

Reconomy Portal

Reconomy offers unparalleled visibility on the results of your recycling via a unique online report builder (Reconomy Portal). No other waste management company offers this.

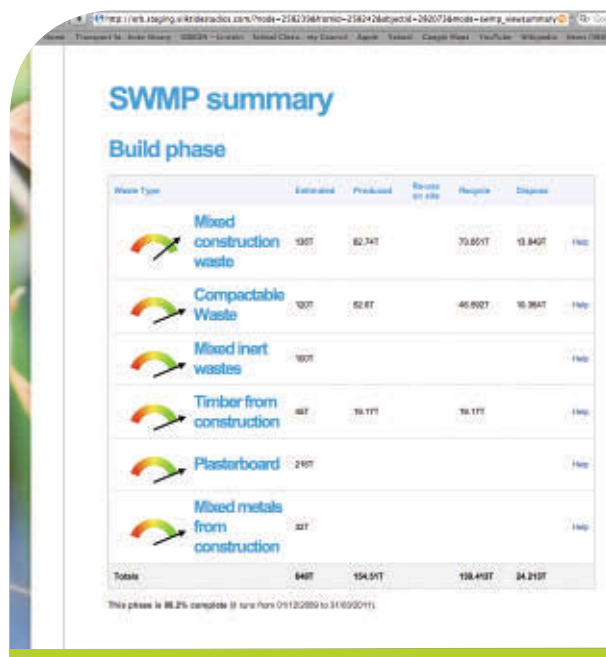

- No need to wait – log on anytime to suit you
- Instant visibility with real-time updates
- Get the data you need, when you need it
- Unique to Reconomy

Site Waste Management Plan

An effective SWMP can be used to minimise your waste and its cost.

We work closely with clients to assess each project to determine:

- Site size and physical constraints
- Waste streams present and the most appropriate segregation system
- Location of the waste compound – where access is most efficient for workers and collection drivers
- Whether hazardous waste will be produced and the most appropriate method of disposal
- Automated data entry reducing manual input and time
- We ensure full legislative and corporate responsibility compliance is met e.g.; Code of sustainable Homes & BREAMM
